

MYC 170

Metalworking evaporative lubricant

Description

Colourless liquid product made up of hydrocarbons reinforced with extreme-pressure, anti-wear additives as well as smoothening agents. Characterised by a near absence of sticky residues, white traces after evaporation. Does not clog spraying systems or nozzles.

Applications

For all operations of: cutting; stamping; folding; cambering; rolling; profiling. On all metals. Ready for use and does not require any preparation or any control of the concentration. Can be applied indifferently: to felt; to the roller; as drip feed; by spraying at a rate of 1 to 4 grammes per m2 according to the operation.

Technical data

Flash point: 62°C
