

TGV 2000

Grease for low temperatures and high speeds

Description

Mineral grease for systems operating at high speeds. Good resistance of the grease to centrifugation.

Applications

For all types of bearings, rollers or mechanisms operating at very high speeds. For slides and guide columns with very fast sequential movements. Bearings of spindle machining centres.

Technical data

Operating temperature range: -45°C to +150°C

NLGI Grade: 2

NDN Factor: 1 000 000
